SFF Committee

SFF-8551

Specification for

Form Factor of 5.25" CD Drives

Standardized as EIA-741 at Rev 1.2 July 27, 1995

This specification was submitted as a project to the Electronic Industries Alliance by being incorporated into SFF-8500, and was Expired at that time.

EIA standards can be purchased from http://global.ihs.com/

Subsequent to adoption by EIA, this specification has been revised

The editor had cause to generate a new revision.

Until these changes have been adopted by the EIA, this specification represents the latest information.
This specification was developed by the SFF Committee prior to it becoming the SFF TA (Technology Affiliate) TWG (Technical Working Group) of SNIA (Storage Networking Industry Association).

The information below should be used instead of the equivalent herein.

POINTS OF CONTACT:

Chairman SFF TA TWG
Email: SFF-Chair@snia.org

If you are interested in participating in the activities of the SFF TWG, the membership application can be found at:
http://www.snia.org/sff/join

The complete list of SFF Specifications which have been completed or are currently being worked on can be found at:
http://www.snia.org/sff/specifications/SFF-8000.TXT

The operations which complement the SNIA's TWG Policies & Procedures to guide the SFF TWG can be found at:
http://www.snia.org/sff/specifications/SFF-8032.PDF

Suggestions for improvement of this specification will be welcome, they should be submitted to:
http://www.snia.org/feedback
SFF Committee documentation may be purchased in hard copy or electronic form. SFF Specifications are available at fission.dt.wdc.com/pub/standards/sff/spec

SFF Committee

**SFF-8551**

Specification for

**Form Factor of 5.25” CD Drives**

Rev 3.3      July 26, 2000

Secretariat:  SFF Committee

Abstract:  This document defines the dimensions for 5.25” devices.

This document provides a common specification for systems manufacturers, system integrators, and suppliers of storage devices. This is an internal working document of the SFF Committee, an industry ad hoc group.

This document is made available for public review, and written comments are solicited from readers. Comments received by the members will be considered for inclusion in future revisions of this document.

Support: This document is supported by the identified member companies of the SFF Committee.

**POINTS OF CONTACT:**

Jay Neer                      I. Dal Allan
SSWG Leader                  Chairman SFF Committee

The following member companies of the SFF Committee voted in favor of this industry specification.

ENDL

The following SFF member companies voted no on the technical content of this industry specification.

Adaptec
Fujitsu CPA
Honda Connector
Pioneer NewMedia
Seagate
Yamagata Fujitsu

The following member companies of the SFF Committee voted to abstain on this industry specification.

Amphenol
Compaq
DDK Fujikura
FCI/Berg
Hitachi Cable
IBM
Matsushita
Maxtor
Molex
Quantum
Thomas & Betts
Toshiba America
Tyco AMP

To save space for SFF Specifications being reviewed, the information on the principles of the SFF Committee and how to join has not been printed.

FIGURE 5-1 FORM FACTOR OF 5.25" CD DRIVE 9
SFF Committee --

Form Factor of 5.25" CD Drives

1. Scope

The 85xx suite of specifications defines the configuration characteristics associated with 5.25" drives.

The purpose of the 85xx suite is to define the external characteristics of drives such that products from different vendors may be used in the same mounting configurations.

The set of specifications provide external dimensions, connectors, connector placement, mounting holes and interface pinouts to assist manufacturers in the systems integration of small form factor disk drives.

- SFF-8500 contains general information regarding connector space, mounting considerations and measurement requirements.
- SFF-8501 defines the dimensions of 5.25" disk drives.
- Other specifications in the 85xx family define the location of connectors on 5.25" drives.

In an effort to broaden the applications for storage products, an ad hoc industry group of companies representing system integrators, peripheral suppliers, and component suppliers decided to address issues which appear in the marketplace that affect many OEMs and vendors.

The SFF Committee was formed in August, 1990 and the first working document was introduced in January, 1991.

1.1 Description of Clauses

Clause 1 contains the Scope and Purpose.

Clause 2 contains Referenced and Related Standards and SFF Specifications.

Clause 3 contains the General Description.

Clause 4 contains the Glossary.

Clause 5 and successive Clauses (if any) contain detailed characteristics.

2. References

The SFF Committee activities support the requirements of the storage industry, and it is involved with several standards.

2.1 Industry Documents

The following interface standards are relevant to many SFF Specifications.

- X3.131R-1994 SCSI-2 Small Computer System Interface
- X3.253-1995 SPI (SCSI-3 Parallel Interface)
- X3.302-xxxx SPI-2 (SCSI-3 Parallel Interface -2)
- X3.277-1996 SCSI-3 Fast 20
- X3.221-1995 ATA (AT Attachment) and subsequent extensions
2.2 SFF Specifications

There are several projects active within the SFF Committee. At the date of printing document numbers had been assigned to the following projects. The status of Specifications is dependent on committee activities.

F = Forwarded  The document has been approved by the members for forwarding to a formal standards body.
P = Published  The document has been balloted by members and is available as a published SFF Specification.
A = Approved  The document has been approved by ballot of the members and is in preparation as an SFF Specification.
C = Canceled  The project was canceled, and no Specification was Published.
D = Development The document is under development at SFF.
E = Expired  The document has been published as an SFF Specification, and the members voted against re-publishing it when it came up for annual review.
e = electronic Used as a suffix to indicate an SFF Specification which has Expired but is still available in electronic form from SFF e.g. a specification has been incorporated into a draft or published standard which is only available in hard copy.
i = Information The document has no SFF project activity in progress, but it defines features in developing industry standards. The document was provided by a company, editor of an accredited standard in development, or an individual. It is provided for broad review (comments to the author are encouraged).
s = submitted The document is a proposal to the members for consideration to become an SFF Specification.

4. General Description

The application environment for small form factor disks is any computer connecting to one or more disks in a restricted packaging environment.

The purpose of an SFF Specification is to provide information that will assist vendors to design products that can fit the same packaging envelope.

Small form factor disks are widely-used where low power and small size are important configuration parameters.

4. Definitions and Conventions

4.1 Definitions

For the purpose of SFF Specifications, the following definitions apply:

4.1.1 IDE (Integrated Drive Electronics): IDE describes a device with built in ATA protocol electronics.

4.1.2 Optional: This term describes features which are not required by the SFF Specification. However, if any feature defined by the SFF Specification is implemented, it shall be done in the same way as defined by the Specification.

4.1.3 PC Card-ATA: This term describes an application specification for the implementation of ATA-like devices compatible with host systems implementing PCMCIA Type III slots.

4.1.4 Reserved: Where this term is used for bits, bytes, fields and code values; the bits, bytes, fields and code values are set aside for future standardization. The default value shall be zero. The originator is required to define a Reserved field or bit as zero, but the receiver should not check Reserved fields or bits for zero.
4.2 Conventions

If there is a conflict between text and tables on a feature described as optional, the table shall be accepted as being correct.

Certain terms used herein are the proper names of signals. These are printed in uppercase to avoid possible confusion with other uses of the same words; e.g., ATTENTION. Any lower-case uses of these words have the normal American-English meaning.

A number of conditions, commands, sequence parameters, events, English text, states or similar terms are printed with the first letter of each word in uppercase and the rest lower-case; e.g., In, Out, Request Status. Any lower-case uses of these words have the normal American-English meaning.

The American convention of numbering is used i.e., the thousands and higher multiples are separated by a comma and a period is used as the decimal point. This is equivalent to the ISO convention of a space and comma.

5. 5.25" CD Drive Form Factor

This specification defines the configuration characteristics associated with 5.25" CD drives. Table 5-1 lists the dimensions associated with Figure 5-1, which is a detail of the form factor which has an integrated bezel. The tolerance on the listed dimensions is +/-0.25mm (0.010").
