8	Specification for
9	Internal Unshielded High Speed Connector System
10 11	Rev 1.2 <u>.1</u> MarchOctober 07 <u>dd13</u> , 2024.
12 13	SECRETARIAT: SFF TA TWG
13 14 15 16 17 18 19 20	This specification is made available for public review at https://www.snia.org/feedback . Comments received will be considered for inclusion in future revisions of this specification. The description of the connector in this specification does not assure that the specific component is available from connector suppliers. If such a connector is supplied, it should comply with this specification to achieve interoperability between suppliers.
21 22 23 24 25 26 27 28 29	ABSTRACT: This specification defines the mechanical specifications and general performance requirements for an Internal Unshielded High Speed Connector System that is designed for use in high speed serial interconnect applications. One such use may be as a 4, 8, or 16 lane (or more) receptacle and the mating cable plug for multiple generations of internal high speed applications. POINTS OF CONTACT:

1 Intellectual Property

The user's attention is called to the possibility that implementation of this specification may require the use of an invention covered by patent rights. By distribution of this specification, no position is taken with respect to the validity of a claim or claims or of any patent rights in connection therewith.

5 This specification is considered SNIA Architecture and is covered by the SNIA IP Policy and as a result goes through 6 a request for disclosure when it is published. Additional information can be found at the following locations:

- Results of IP Disclosures: https://www.snia.org/sffdisclosures
- SNIA IP Policy: <u>https://www.snia.org/ippolicy</u>
- 10

11 Copyright

12 The SNIA hereby grants permission for individuals to use this document for personal use only, and for corporations

- and other business entities to use this document for internal use only (including internal copying, distribution, and display) provided that:
- 14 15

7 8

9

- 1. Any text, diagram, chart, table or definition reproduced shall be reproduced in its entirety with no alteration, and,
- 2. Any document, printed or electronic, in which material from this document (or any portion hereof) is reproduced shall acknowledge the SNIA copyright on that material, and shall credit the SNIA for granting permission for its reuse.
- 16

Other than as explicitly provided above, there may be no commercial use of this document, or sale of any part, or this entire document, or distribution of this document to third parties. All rights not explicitly granted are expressly reserved to SNIA.

20

Permission to use this document for purposes other than those enumerated (Exception) above may be requested by e-mailing <u>copyright request@snia.org</u>. Please include the identity of the requesting individual and/or company and a brief description of the purpose, nature, and scope of the requested use. Permission for the Exception shall not be unreasonably withheld. It can be assumed permission is granted if the Exception request is not acknowledged within ten (10) business days of SNIA's receipt. Any denial of permission for the Exception shall include an explanation of such refusal.

29 Disclaimer

The information contained in this publication is subject to change without notice. The SNIA makes no warranty of any kind with regard to this specification, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. The SNIA shall not be liable for errors contained herein or for incidental or consequential damages in connection with the furnishing, performance, or use of this specification.

7

The development work on this specification was done by the SNIA SFF TA TWG, an industry group. Since its formation as the SFF Committee in August 1990, the membership has included a mix of companies that are leaders across the industry.

For those who wish to participate in the activities of the SFF TA TWG, the signup for membership can be found at <u>https://www.snia.org/sff/join</u>https://www.snia.org/join.

8				
9	Revision History			
10				
11	Rev 1.0	June 02, 2021:		
12		- First Publication		
13	Rev 1.1	March 01, 2023:		
14		 Updated the tolerances of dimensions A16, C16, E16, and G16 from ±0.20 to +0.20/-0.05. 		
15		- The values for dimensions B08 and B09 in Table 5-6 were reversed to match the applicable		
16		drawing dimensions shown in Figure 5-8.		
17		- Updated Figure 6-1 and Table 6-1 to add dimension J23.		
18		 Updated Figure 6-2, Figure 6-3, and Table 6-2 to add dimension L23. 		
19		- Updated Figure 6-4 and Table 6-3 to add dimension N21.		
20		- Updated Figure 6-5 and Table 6-4 to add dimension Q21.		
21		- Updated copyright date to 2023.		
22	Rev 1.2	March 07, 2024:		
23		- Minor editorial edits		
24		- Added the no anti-skew flange versions of the 38P, 124P, and 148P size plugs in the same		
25		manner as the 74P size plug that was already included. Added new Figure 6-2 Straight Plug		
26		with No Side Flanges for 38 Contacts and modified Table 6-1 accordingly, including adding		
27		Notes 1, 2, & 3. Added new Figure 6-6 Straight Plug with No Side Flanges for 124 Contacts		
28		and modified Table 6-3 accordingly, including adding Notes 1, 2, & 3. Added new Figure 6-8		
29		Straight Plug with No Side Flanges for 148 Contacts and modified Table 6-4 accordingly,		
30		including adding Notes 1, 2, & 3.		
31		 Updated list of Industry Documents in section 2.1. 		
32		 Added EDSFF to Acronyms and Abbreviations in section 3.2. 		
33		- Added new section 4.1.5 Connector Configuration 5 – Hybrid EDSFF Solution Connectors and		
34		inserted a new Figure 4-6Figure 4-6, renumbering the remaining section 4 figures accordingly.		
35		- Inserted a new Section 7 Hybrid EDSFF Solution Mechanical Specification Hybrid EDSFF Solution		
36		Mechanical Specification, renumbering the remaining section numbers accordingly. Added new		
37		Figure 7-1, new Table 7-1, new Figure 7-2, new Table 7-2, new Figure 7-3, new Table 7-3,		
38		new <u>Figure 7-3Figure 7-</u> 4, new <u>Table 7-3</u> Table 7-4, new <u>Figure 7-4Figure 7-5</u> , new <u>Table</u>		
39		<u>7-4Table 7-5</u> , new Figure 7-5Figure 7-6, and new Table 7-5Table 7-6		
40		- In Appendix A, added new section A.2.5 including new Figure A-5 Figure A-5 and new Table		
41		<u>A-5</u> Table A-5		
42		- Added a new paragraph to Section 7.1 mentioning how the signals and sidebands may be		
43		connected within the hybrid EDSFF solution plugs.		
44		- Updated Figure 7-1 to align Datum A with the paddle card thickness dimension, K02, since the		
45		datum is intended to be the centerline of the paddle card thickness, not the bottom surface.		
46		- Updated Figure 7-3 to add the missing centerlines in the top view, added dimension BB35,		
47		updated dimension BB13, and added the missing True Position tolerance to the BB10		
48		dimension. Also, updated Table 7-3 accordingly.		
49		- Updated <u>Figure 7-3Figure 7-4</u> to correct a typo regarding dimensions BD19, BD20, and BD21		
50		(were incorrectly labeled in this figure as BE19, BE20, and BE21).		
51		- Updated <u>Figure 7-5Figure 7-6</u> to add the missing centerlines in the top view, added dimension		
52		BA35, updated dimension BA13, and moved the True Position tolerance from the BA14		
53		dimension to the BA10 dimension. Also, updated <u>Table 7-5 Table 7-6</u> accordingly.		
54		- Fixed several website addresses & associated hyperlinks and made a few editorial changes per		
55		the Approval Ballot Comment Resolution.		
56	Rev 1.2.1	October <u>13, 2024:</u>		

PUBLISHEDDRAFT

SFF-TA-1016 Rev 1.2.1

- Add hybrid solution pin numbering in section 4.2
- Update hybrid solution picture in Figure 4-6
- Hybrid E1 receptacle connector is removed. All hybrid plugs mate to hybrid standard receptacle connector. Drawings are updated in section 7.
- Add additional notes to hybrid standard receptacle connector.

1 **1. Scope**

This specification defines the general description of this form factor, the connector and mating plug mechanical specification, some performance requirements, and the electrical interface. Additional informative details such as the PCB layouts are included in an appendix.

5 2. References and Conventions

6 2.1 Industry Documents

1 2.3 Conventions

The following conventions are used throughout this document:

34 **DEFINITIONS**

Certain words and terms used in this standard have a specific meaning beyond the normal English meaning. These words and terms are defined either in the definitions or in the text where they first appear.

8 ORDER OF PRECEDENCE

9 If a conflict arises between text, tables, or figures, the order of precedence to resolve the conflicts is text; then 10 tables; and finally figures. Not all tables or figures are fully described in the text. Tables show data format and 11 values.

12 13 **LISTS**

37

14 Lists sequenced by lowercase or uppercase letters show no ordering relationship between the listed items. 15

16 EXAMPLE 1 - The following list shows no relationship between the named items:

- a. red (i.e., one of the following colors):
 - A. crimson; or
 - B. pink;
 - b. blue; or
 - c. green.

Lists sequenced by numbers show an ordering relationship between the listed items.

EXAMPLE 2 -The following list shows an ordered relationship between the named items:

- 1. top;
 - 2. middle; and
 - 3. bottom.

Lists are associated with an introductory paragraph or phrase, and are numbered relative to that paragraph or phrase (i.e., all lists begin with an a. or 1. entry).

33 **DIMENSIONING CONVENTIONS**

The dimensioning conventions are described in ASME Y14.5, Geometric Dimensioning and Tolerancing. All dimensions are in millimeters, which are the controlling dimensional units (if inches are supplied, they are for guidance only).

38 NUMBERING CONVENTIONS

The ISO convention of numbering is used (i.e., the thousands and higher multiples are separated by a space and a period is used as the decimal point). This is equivalent to the English/American convention of a comma and a period.

3. Keywords, Acronyms, and Definitions

2 For the purposes of this document, the following keywords, acronyms, and definitions apply.

3 3.1 Keywords

1

4

5 6

7

11

21

27

32

May or / may not: Indicates flexibility of choice with no implied preference.

Obsolete: Indicates that an item was defined in prior specifications but has been removed from this specification.

8 **Optional:** Describes features that are not required by the SFF specification. However, if any feature defined by the 9 SFF specification is implemented, it shall be done in the same way as defined by the specification. Describing a 10 feature as optional in the text is done to assist the reader.

Prohibited: Describes a feature, function, or coded value that is defined in a referenced specification to which this SFF specification makes a reference, where the use of said feature, function, or coded value is not allowed for implementations of this specification.

Reserved: Defines the signal on a connector contact [when] its actual function is set aside for future standardization. It is not available for vendor specific use. Where this term is used for bits, bytes, fields, and code values; the bits, bytes, fields, and code values are set aside for future standardization. The default value shall be zero. The originator is required to define a Reserved field or bit as zero, but the receiver should not check Reserved fields or bits for zero.

Restricted: Refers to features, bits, bytes, words, and fields that are set aside for other standardization purposes (e.g., entities). If the context of the specification applies the restricted designation, then the restricted bit, byte, word, or field shall be treated as a <u>value whose definition is not in scope of this document and is not interpreted</u> by this specification.reserved bit, byte, word, or field (e.g., a restricted byte uses the same value as defined for a reserved byte).

Shall: Indicates a mandatory requirement. Designers are required to implement all such mandatory requirements to ensure interoperability with other products that conform to this specification.

31 **Should:** Indicates flexibility of choice with a strongly preferred alternative.

Wendor specific: Indicates something (e.g., a bit, field, code value) that is not defined by this specification.
Specification of the referenced item is determined by the manufacturer and may be used differently in various implementations.

36

37 **3.2 Acronyms and Abbreviations**

- 38 AOC: Active Optical Cable
- 39 GND: Ground
- 40 EDSFF: Enterprise and Datacenter Standard Form Factor
- 41 **EMLB:** Early Mate Late Break
- 42 **IDC:** Insulation Displacement Contact
- 43 **IDT:** Insulation Displacement Termination

- 47 **RA:** Right Angle
- 48 **SI:** Signal Integrity
- 49 **SMT:** Surface Mount Technology
- 50 VT: Vertical
- 51

1 3.3 Definitions

Alignment guides: A term used to describe features that pre-align the two halves of a connector interface before electrical contact is established. Other common terms include: guide pins, guide posts, blind mating features, mating features, alignment features, and mating guides.

6 Connector: Each half of an interface that, when joined together, establish electrical contact and mechanical 7 retention between two components. In this specification, the term connector does not apply to any specific gender; 8 it is used to describe the receptacle, the plug or the card edge, or the union of receptacle to plug or card edge. 9 Other common terms include: connector interface, mating interface, and separable interface.

11 Contact mating sequence: A term used to describe the order of electrical contact established/ terminated during 12 mating/un-mating. Other terms include: contact sequencing, contact positioning, mate first/break last, EMLB (early 13 mate late break) staggered contacts, and long pin/short pin.

15 **Contacts:** A term used to describe connector terminals that make electrical connections across a separable 16 interface.

18 Module: In this specification, module may refer to a plug assembly at the end of a copper (electrical) cable (passive 19 or active), an active optical cable (AOC), an optical transceiver, or a loopback.

Plug: A term used to describe the connector that contains the penetrating contacts of the connector interface as shown in Figure 3-1. Plugs typically contain stationary contacts. Other common terms include male, pin connector, and card edge.

Figure 3-1 Plug and Receptacle Definition

Plated through hole termination: A term used to describe a termination style in which rigid pins extend into or through the PCB. Pins are soldered to keep the connector or cage in place. Other common terms are through hole or PTH.

Press fit: A term used to describe a termination style in which collapsible pins penetrate the surface of a PCB. Upon insertion, the pins collapse to fit inside the PCB's plated through holes. The connector or cage is held in place by the interference fit between the collapsed pins and the PCB.

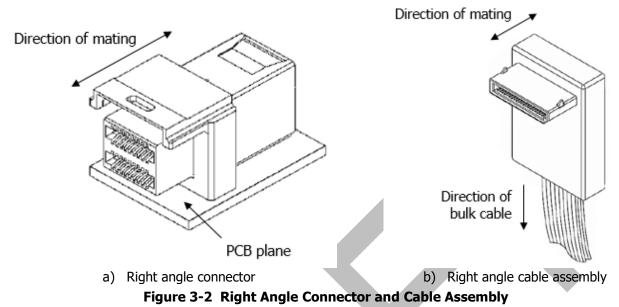

35 **Receptacle:** A term used to describe the connector that contains the contacts that accept the plug contacts as 36 shown in Figure 3-1. Receptacles typically contain spring contacts. Other common terms include female and socket 37 connector.

- 38
- 39

Page 17

Copyright © 2024 SNIA. All rights reserved.

- 1 **Right Angle:** A term used to describe either a connector design where the mating direction is parallel to the plane
- 2 of the printed circuit board upon which the connector is mounted or a cable assembly design where the mating
- 3 direction is perpendicular to the bulk cable.

5 **Straight:** A term used to describe a connector design where the mating direction is parallel to the bulk cable.

Surface mount: A term used to describe a termination style in which solder tails sit on pads on the surface of a
 PCB and are then soldered to keep the connector or cage in place. Other common terms are surface mount
 technology or SMT.

Termination: A term used to describe a connector's non-separable attachment point such as a connector contact to a bulk cable or a connector solder tail to a PCB. Common PCB terminations include: surface mount (SMT), plated through hole termination (PTH), and press fit (PF). Common cable terminations include insulation displacement contact (IDC), insulation displacement termination (IDT), wire slots, solder, welds, crimps, and brazes.

16 Vertical: A term used to describe a connector design where the mating direction is perpendicular to the printed 17 circuit board upon which the connector is mounted.

18

23

4

19 **Wipe:** The distance a contact travels on the surface of its mating contact during the mating cycle as shown in 20 Figure 3-3.

1 4. General Description

2 4.1 Configuration Overview/Descriptions

This specification details a connector system that includes several sizes of straight and right angle plug connectors and the mating right angle and vertical receptacle connectors with 38, 74, 124, or 148 contact positions. The plugs include integrated guidance features for improved stability when mated.

18 19

4.1.5 Connector Configuration 5 – Hybrid EDSFF Solution Connectors

This configuration is a compact hybrid plug configuration, where the plug has a mating interface with 38 contacts similar to the other 38 contact plug connectors except it also includes a side exit of the plug that incorporates an SFF-TA-1002 style EDSFF receptacle connector and may or may not include another side exit for cable wires. The mating receptacle connectors in this configuration are vertical type connectors with a larger latch shroud to accommodate the latching mechanism of the hybrid plugs. See section 7 for the various mechanical details of these hybrid plugs and mating receptacles. See SFF-TA-1002 for specifics regarding the 1C side exit interface or 2C side exit interface of the EDSFF style receptacle connector incorporated into these hybrid plug connectors.

LZZ	Tab Height		(For Release)	0.05	MAX
L23	Datum A to Datum E			3.10	MAX
NOTES					

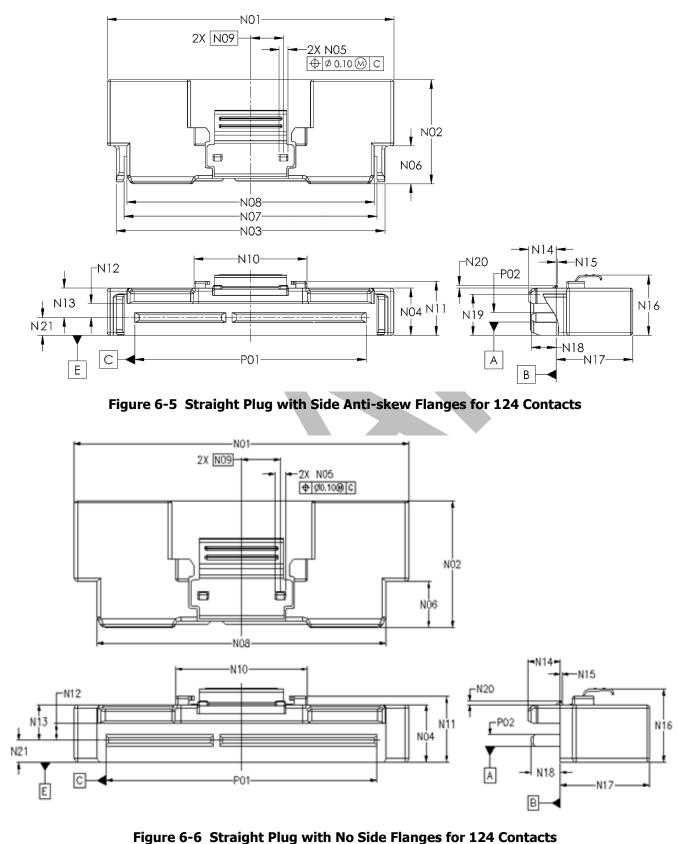

Table 6-2 Dimensions for 74 Contact Plug Connectors

1. The narrow option allows for use in limited width applications, such as putting two connectors side-by-side along the short edge of a low-profile PCIe card. The narrow option does not include the side Anti-skew Flanges and the L01 dimension is reduced.

2. For the narrow option where the side Anti-skew Flange features are not included, this dimension equals dimension L08.

3. For the narrow option where the side Anti-skew Flange features are not included, these dimensions are not used.

Table 6-3 Dimensions for 124 Contact Plug Connectors

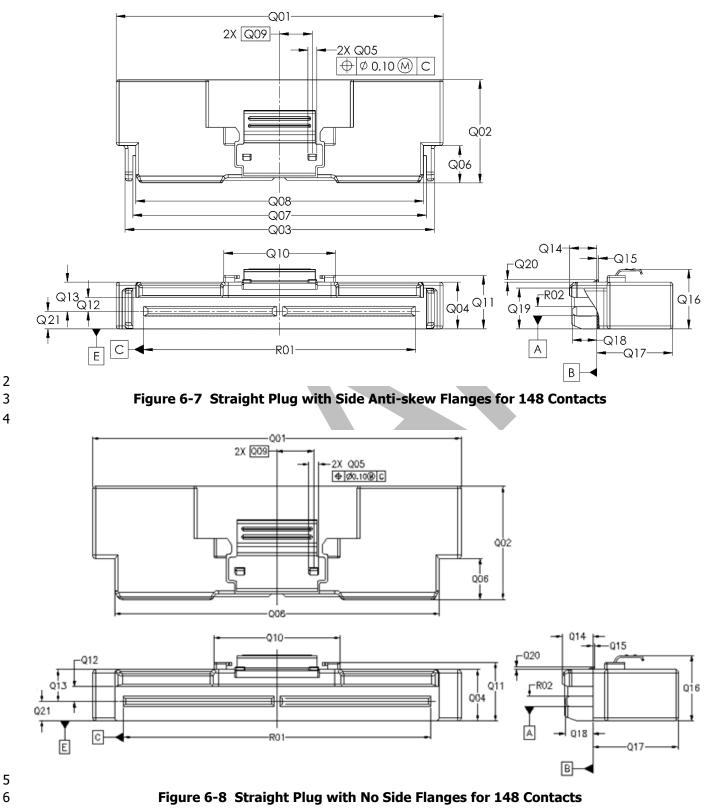

NOTES:

1. The narrow option allows for use in limited width applications. The narrow option does not include the Side Anti-skew Flanges and the N01 dimension is reduced.

2. For the narrow option where the Side Anti-skew Flange features are not included, this dimension equals dimension N08.

3. For the narrow option where the Side Anti-skew Flange features are not included, these dimensions are not used.

7. Hybrid EDSFF Solution Mechanical Specification

2 7.1 Hybrid EDSFF Solution Overview

Certain applications may require a compact hybrid plug configuration, where the plug has a mating interface with 38 contacts and a side exit of the plug that incorporates an SFF-TA-1002 style EDSFF receptacle connector and may or may not include another side exit for cable wires.

6 7 The details about the pinouts used for these hybrid plugs and the mating receptacle can be customer-specific. 8 However, the general intent is for the high-speed lanes to pass from the EDSFF 1C or 2C receptacle at one sideexit of these hybrid plugs across to the wires at the other side-exit. These side-exit wires may lead to another SFF-9 10 TA-1016 plug as a cable assembly. There is intent for some sidebands (the sidebands are signals, power, and/or ground) to connect from the EDSFF 1C or 2C receptacle side-exit to the 38-contact card edge interface via the 11 paddle card that is intended to plug into the mating hybrid standard vertical receptacle connector. Some sidebands 12 may also connect from the wire side-exit to the 38-contact card edge interface via the paddle card, or to the EDSFF 13 1C or 2C receptacle side-exit, or may be connected to both. 14

15

1

16 <u>The signal integrity requirements listed in Table 9-1 do not apply to the hybrid standard vertical receptable</u> 17 connector. The hybrid standard vertical receptable connector uses discrete contacts. No pin is tied together.

Table 7-56 Dimensions for Standard Vertical Hybrid Standard Vertical Receptacle Connector Mate to the Hybrid E3 Plugs with 38 Contacts

8. Test Requirements and Methodologies (TS-1000, etc.)

2 8.1 Performance Tables

EIA-364-1000 (TS-1000) shall be used to define the test sequences and procedures for evaluating the connector system described in this document. Where multiple test options are available, the manufacturer shall select the appropriate option where not previously specified. The selected procedure should be noted when reporting data. If there are conflicting requirements or test procedures between EIA-364 procedures and those contained within this document, this document shall be considered the prevailing authority.

9 Unless otherwise specified, procedures for sample size, data, and collection to be followed as specified in EIA-364 1000. See EIA-364-1000 Annex B for objectives of tests and test groups.

11

12 <u>Table 8-1</u> summarizes the performance criteria that are to be satisfied by the connector described in this 13 document. Most performance criteria are validated by EIA-364-1000 testing, but this test suite leaves some test 14 details to be determined. To ensure that testing is repeatable, these details are identified in <u>Table 8-2</u>Table 8-2. 15 Finally, testing procedures used to validate any performance criteria not included in EIA-364-1000 are provided in 16 <u>Table 8-3</u>Table 8-3.

17 18

Table 8-1 Form Factor Performance Requirements				
Performance Parameters	Description/ Details	Requirement		
Mechanical/ Phys	ical Requirements	-		
Plating Type	Plating type on connector contacts	Precious		
Surface Treatment	Surface treatment on connector contacts	Non-lubricated		
Wipe length	Designed distance a contact traverses over a mating contact surface during mating and resting at a final position	Greater than 0.127mm		
Rated Durability Cycles	The expected number of durability cycles a component is expected to encounter over the course of its life	Connector: 200 cycles Module: 200 cycles		
Latched Mating Force*	Amount of force needed to mate a module with a connector when latches are deactivated	1.1 N/contact pair + 10 N MAX		
Latched Unmating Force*	Amount of forced needed to separate a module from a connector when latches are deactivated	0.1 N/contact pair MIN		
Latch Retention*	Amount of force the latching mechanism can withstand	50 N MIN		
Wrenching Strength*	Amount of force in various directions the product can withstand while mated	25 N MIN for each axis direction		

Table 8-1 Form Factor Performance Requirements

Performance Parameters	Description/ Details	Requirement
Environmental Ro	equirements	1
Field Life	The expected service life for a component	10 years
Field Temperature	The expected service temperature for a component	0°C to +65°C
Storage Temperature*	The expected storage temperature for a component when not in use	-20°C to +80°C
Storage Humidity*	The expected storage humidity for a component when not in use	80% Relative Humidity
Electrical Require	ements	
Current*	Maximum current to which a contact is exposed in use	1.1A per contact MAX 1.1A per power contact MAX
Operating Rating Voltage	Maximum voltage to which a contact is exposed in use	30V DC per contact MAX

1

Internal Unshielded High Speed Connector System

<u>Table 8-2</u> Table 8-2 describes the details necessary to perform the tests described in the EIA-364-1000 test sequences. Testing shall be done in accordance with EIA-364-1000 and the test procedures it identifies in such a way that the parameters/ requirements defined in <u>Table 8-1</u> are met. Any information in this table supersedes EIA-364-1000.

Table 8-2 EIA-364-1000 Test Details

4 5 6

2 3

Test	Test Descriptions and Details	Pass/ Fail Criteria
		Pass/ Fail Citteria
Mechanical/ Physic	1	
Durability	EIA-364-09	No evidence of physical
(preconditioning)	To be tested with connector and module	damage
	(Latches should be locked out) EIA-364-09	No visual damage to mating
Durability	To be tested with connector and module	No visual damage to mating interface or latching
(see Note 1)	(Latches should be locked out per EIA-364-1000)	mechanism
Environmental Test		Inechanism
	EIA-364-65 Class IIA	
Mixed Flowing	Duration: 7 days	No intermediate test criteria
Gas (see Note 2)	Test option Per EIA-364-1000: 4	No internediate test chiena
Electrical Tests		
	EIA-364-23	
Low Level Contact	20 mV DC MAX, 100 mA MAX	20 mΩ MAX change from
Resistance	To include wire termination or connector-to-board	baseline
(see Note 3)	termination	
	EIA-364-20	No defect or breakdown
Dielectric	Method B	
Withstanding	300 VDC minimum for 1 minute	between adjacent contacts -AND-
Voltage	Applied voltage may be product / application	0.5 mA Max Leakage Curren
	specific	
NOTES:		
 If the durability re 	quirement on the connector is greater than that of the	module, modules may be

1. If the durability requirement on the connector is greater than that of the module, modules may be replaced after their specified durability rating.

2. Test option, temperature, duration must be reported.

3. The first low level contact resistance reading in each test sequence is used to determine a baseline measurement. Subsequent measurements in each sequence are measured against this baseline.

<u>Table 8-3</u> describes the testing procedures necessary to validate performance criteria not validated by EIA-364-1000 testing. The tests are to be performed in such a way that the parameters/ requirements defined in <u>Table 8-1</u> are met.

Table 8-3 Additional Test Procedures				
Test (see Note 1)	Test Descriptions and Details	Pass/ Fail Criteria		
Mechanical/ Physic	cal Tests			
Latched Mating Force	EIA-364-13 To be tested with connector (with integrated latch shroud) and module (plug) without any heat sinks. Latching mechanism deactivated (locked out)	_		
Latched Unmating Force	EIA-364-13 To be tested with connector (with integrated latch shroud) and module (plug) without any heat sinks. Latching mechanism deactivated (locked out)	Refer to <u>Table 8-1</u> Table 8-1 -AND- No physical damage to any components		
Latch Retention	EIA-364-13 To be tested with connector (with integrated latch shroud) and module (plug) without any heat sinks Latching mechanism engaged (not locked out)			
Wrenching Strength	Bend cable 90° at minimum bend radius. Pull 25 N Min in each of 4 axis directions for round cable. Pull 25 N Min in each of 2 axis directions for flat cable.	No damage to plug / cable assembly.		
Environmental Tes	ts			
Storage Temperature	EIA-364-32 Method A, Test Condition 1, Duration 4 Use min and max Field Temperatures listed in <u>Table</u> <u>8-1Table 8-1</u> for temperature range	Refer to <u>Table 8-1</u> Table- 8-1		
Storage Humidity	EIA-364-31	Refer to <u>Table 8-1</u> Table- 8-1		
Electrical Tests				
Current	EIA-364-70 Method 3, 30-degree temperature rise Contacts energized: Up to a maximum of 6 adjacent contacts per side, 12 contacts total	Refer to <u>Table 8-1</u> Table- 8-1 for current magnitude		
NOTES: 1. Requirements and tests specified that fall outside of EIA-364-1000 testing are listed in this table.				

9. Electrical Characteristics

2 9.1 Signal Integrity Requirements

3 The signal integrity (SI) requirements for a mated connector pair are listed in Table 9-1 for various line rates.

Products meeting this specification shall meet the appropriate requirements listed for the applicable line rate.
 Testing of these requirements shall comply with specification SFF-TA-1024. Additional connector SI requirements

6 and any cable assembly SI requirements are application specific and are out of the scope of this specification.

7 Refer to the appropriate performance specifications required by the specific application (e.g. Ethernet, Fibre

8 Channel, InfiniBand, PCIe, SAS, or some custom application).

9 10

Table B-1 SMT Lead Geometry Dimensions

Variable	Description	Nominal Dimension (mm) For Vertical Connectors	Nominal Dimension (mm) For Right Angle Connectors
А	Pad Width	0.35	0.35
В	Lead Thickness	0.2	0.2
С	Lead Length on Pad	0.97	1.04
D	Lead Trip to Footprint Centerline	2.75	2
E	Pad Length	1.2	1.4
F	Distance Between Inside Edges of Pads	3.4	1.55
W	Lead Width	0.22	0.22

Appendix C: Reference Pinout Diagrams (Informative)

2 C.1 Overview of Contact Geometry Patterns

3 The mating plug contains an application specific paddle card that uses a longer pad for any first-mate pad locations 4 (for ground connections) and a shorter pad for any second-mate pad locations (for high speed signals or sidebands). 5 The contacts for the connectors in this specification use a discrete arrangement that allows for repurposing contact locations to allow connectors to be manufactured for multiple applications that require a different allocation of high 6 7 speed differential pairs and sideband signals. If a connector implementation uses different contact geometry for 8 ground contacts versus high speed signal contacts or sideband signal contacts, then the construction should follow 9 a typical "GSSGSSG" pattern, where each "G" indicates a "ground contact" and each "S" indicates a "high speed 10 signal contact" used for the high speed lanes as shown in Table C-1 while specific contact locations (see typical examples shown in Table C-2 and Table C-3) may use a pattern of "GSbSbSbSbSbSbG", where each "G" indicates a 11 "ground contact" and each "Sb" indicates a "sideband signal contact" which is used for application specific purposes. 12 All the tables in this appendix show which contacts would use a "ground" type geometry and which contacts would 13 use a "signal" (high speed or sideband) type geometry if and only if the geometry of those contacts are different 14 15 and these tables are not intended to define an actual pinout. Note, for a given application, the contact locations identified as "GND" type in the connector should correspond with the first-mate pads of the mating plug paddle 16 card for that application. 17

2 C.2 Recommended Cable Assembly Wire Diagrams

The following figures show wiring diagrams for a few of the possible cable assemblies based on these Straight Plugs or Right Angle Plugs at each end of the cable assembly. The particular function for each SIDEBAND is specific to the particular application (e.g. SAS, PCIe, or other). Therefore, whether a particular SIDEBAND actually connects physically from the P1 end to the P2 end of a cable assembly may be specific to the application. Refer to specification SFF-9402, a Reference Guide for Multi-Protocol Internal Cable Pinouts for SAS and/or PCIe, to see pinouts for other similar 38-circuit and 74-circuit connectors, such as the SlimSAS connectors (SFF-8654), as an example of how each SIDEBAND may be used.
