

SFF-TA-1008

Specification for

Enterprise and Datacenter Standard Form Factor (E3)

Revision 2.1.2

~~October 31~~ December 11, 2025~~3~~

SECRETARIAT: ~~-SFF TA-TWG~~

This specification is made available for public review at <https://www.snia.org/sff/specifications>. Comments may be submitted at <https://www.snia.org/feedback>. Comments received will be considered for inclusion in future revisions of this specification.

The description of each device in this specification does not assure that the specific component is available from device suppliers. If such a device is supplied, it should comply with this specification to achieve interoperability between suppliers.

~~This revision of the specification supersedes and obsoletes all previous versions of this specification.~~

ABSTRACT: ~~-~~This specification defines the mechanical attributes for a family of form factor devices known as E3 with multiple length and multiple thickness variants that can be used in 1U, 2U, and any other host systems designed to support this form factor.

This specification provides a common reference for systems manufacturers, system integrators, and suppliers. This specification originates from Enterprise and Datacenter SSD Form Factor Working Group (EDSFF). With non-SSD devices also using EDSFF and agreement from the EDSFF Working Group, the SFF TA TWG changed EDSFF to Enterprise and Datacenter Standard Form Factor.

COPYRIGHT ~~Copyright~~

~~The~~ SNIA hereby grants permission for individuals to use this document for personal use only, and for corporations and other business entities to use this document for internal use only (including internal copying, distribution, and display) provided that:

1. Any text, diagram, chart, table or definition reproduced shall be reproduced in its entirety with no alteration, and,
2. Any document, printed or electronic, in which material from this document (or any portion hereof) is reproduced shall acknowledge the SNIA copyright on that material, and shall credit ~~the~~ SNIA for granting permission for its reuse.

Other than as explicitly provided above, there may be no commercial use of this document, or sale of any part, or this entire document, or distribution of this document to third parties. All rights not explicitly granted are expressly reserved to SNIA.

Permission to use this document for purposes other than those enumerated (Exception) above may be requested by e-mailing copyright_request@snia.org. Please include the identity of the requesting individual and/or company and a brief description of the purpose, nature, and scope of the requested use. Permission for the Exception shall not be unreasonably withheld. It can be assumed permission is granted if the Exception request is not acknowledged within ten (10) business days of SNIA's receipt. Any denial of permission for the Exception shall include an explanation of such refusal.

Disclaimer

The information contained in this publication is subject to change without notice. ~~The~~ SNIA makes no warranty of any kind with regard to this specification, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. ~~The~~ SNIA shall not be liable for errors contained herein or for incidental or consequential damages in connection with the furnishing, performance, or use of this specification.

Suggestions for revisions should be directed to <https://www.snia.org/feedback/>.

Foreword

The development work on this specification was done by the SNIA SFF TWG, an industry group. Since its formation as the SFF Committee in August 1990, as well as since SFF's transition to SNIA in 2016, the membership has included a mix of companies which are leaders across the industry.

For those who wish to participate in the activities of the SFF TWG, the signup for membership can be found at <https://www.snia.org/sff/join>.

Revision History

Rev 1.0 *March 3, 2020*

- First release

Rev 2.0 *November 6, 2020*

- **This revision of the specification supersedes and obsoletes all previous versions of this specification.**

- Changes to the nomenclature describing the devices
- Increasing the length of a short length device to 112.75mm
- Changed E3.S length tolerance to +/-0.4mm
- Changed E3.L length tolerance to +/-0.4m
- Changed the device nomenclature of thickness from 2x to 2T
- Changed thickness tolerance of 7.5mm devices to 7.5 +0.2/-0.5mm
- Updated the connector pin 1 location
- Changed Table 6-1 to informative
- Added Note 10 to allow for up to three screws in the riding surfaces
- Added a Section 0 for label requirements & added dimensions on label areas
- Added references governing use of Hot Surface Warning Label
- Changes to the LED requirements and location
- Updates to drawings & minor edits to drawing notes
- Made several editorial changes

Rev 2.1 *October 31, 2023*

- Updated Points of Contact
- Updated EDSFF acronym to Enterprise and Datacenter Standard Form Factor
- Clarified use models in Abstract and General Description
- Updated all mechanical drawings to show support for the 4C+ connector
- Section 3.3: Updated host and device definitions
- Section 4: Clarified the areas of the surfaces and screw holes that allowed to be either conductive or non-conductive. Clarified riding surfaces.
- Added example 3D view of E3.S 2T 2x1C device in Figure 4-1
- Section 5.2: Added requirements for LED apertures
- Added Section 5.4 E3.S 2T 2x1C connectors
- Section 5.5: Clarified language describing label size and positioning
- Section 5.6: Updated to better align LED definition with SFF-TA-1009
- Table 5-1: Changed nomenclature for form factor "height" to "width" to align with other form factor specs
- Figure 5-7: Added clarification on E3 2T minimum thickness
- Updated Figure 5-12 to include side and rear views
- Changed Figure 5-12 flatness and perpendicularity requirements from 0.1mm to 0.25mm
- Section 6: Updated Initial Slot Power requirements
- Section 6.3: Added "Sustained" to title for Section 6.3 and Table 6-2
- Section 7: Added Initial Slot Power requirements and reordered

Rev 2.1.2 *December 11, 2025*

- Editorial changes to boilerplate
- Section 5.2: Updated drawings, notes, and measurements for Direct Liquid Cooling (DLC) support. Devices based on Revision 2.1 and older may not be compatible, starting with Revision 3.0 specification.

- Section 5.3, 5.4: Removed secondary grounding strip in the 2T.
- Section 5.5: Updated drawings and notes for E3.S and E3.L labeling as a function of DLC enablement.
- Section 6: Power/thermal requirements updated.

1. Scope

This specification defines the mechanical attributes of a family of device form factors that fit in host systems designed to support this form factor.

2. References and Conventions

2.1 Industry Documents

The following documents are relevant to this specification:

- ASME Y14.5-2009 Dimensioning and Tolerancing published by ASME
- SFF-TA-1002 Protocol Agnostic Multi-Lane High Speed Connector specification
- SFF-TA-1009 Enterprise and Datacenter SSD Pin and Signal specification
- SFF-TA-1023 Thermal Specification for EDSFF Devices
- UL/IEC/EN 60950-1 Information Technology Equipment – Safety – Part 1: General Requirements
- UL/IEC/EN 62368-1 Audio/Video Information and Communication Technology Equipment

2.2 Sources

The complete list of SFF documents which have been published, are currently being worked on, or that have been expired by the SFF Committee can be found at <https://www.snia.org/sff/specifications>. Suggestions for improvement of this specification will be welcome, they should be submitted to <https://www.snia.org/feedback>.

Copies of ASME standards may be obtained from the American Society of Mechanical Engineers (<https://www.asme.org>).

2.3 Conventions

DEFINITIONS

Certain words and terms used in this standard have a specific meaning beyond the normal English meaning. These words and terms are defined either in the definitions or in the text where they first appear.

ORDER OF PRECEDENCE:

If a conflict arises between text, tables, or figures, the order of precedence to resolve the conflicts is text; then tables; and finally figures. Not all tables or figures are fully described in the text. Tables show data format and values.

LISTS:

Lists sequenced by lowercase or uppercase letters show no ordering relationship between the listed items.

EXAMPLE 1 - The following list shows no relationship between the named items:

- a. red (i.e., one of the following colors):
 - A. crimson; or
 - B. pink;
- b. blue; or
- c. green.

Lists sequenced by numbers show an ordering relationship between the listed items.

EXAMPLE 2 -The following list shows an ordered relationship between the named items:

- 1. top;
- 2. middle; and
- 3. bottom.

Lists are associated with an introductory paragraph or phrase, and are numbered relative to that paragraph or phrase (i.e., all lists begin with an a. or 1. entry).

DIMENSIONING CONVENTIONS:

The dimensioning conventions are described in ASME-Y14.5, Geometric Dimensioning and Tolerancing. All dimensions are in millimeters, which are the controlling dimensional units (if inches are supplied, they are for guidance only).

NUMBERING CONVENTIONS:

The ISO convention of numbering is used (i.e., the thousands and higher multiples are separated by a space and a period is used as the decimal point). This is equivalent to the English/American convention of a comma and a period.

American	French	ISO
0.6	0,6	0.6
1,000	1 000	1 000
1,323,462.9	1 323 462,9	1 323 462.9

3. Keywords, Acronyms, and Definitions

For the purpose of this document, SFF Specifications, the following keywords, acronyms, and definitions apply.

3.1 Keywords

Mandatory: Indicates items to be implemented as defined by this specification

May: Indicates flexibility of choice with no implied preference

May or may not: Indicates flexibility of choice with no implied preference.

Obsolete: Indicates that an item was defined in prior specifications but has been removed from this specification.

Optional: ~~This term d~~Describes features which are not required by the SFF Specification. However, if any feature defined by the SFF Specification is implemented, it shall be done in the same way as defined by the ~~S~~specification. Describing a feature as optional in the text is an informal callout done to assist the reader. ~~If there is a conflict between text and tables on a feature described as optional, the table shall be accepted as being correct.~~

Prohibited: Describes a feature, function, or coded value that is defined in a referenced specification to which this SFF specification makes a reference, where the use of said feature, function, or coded value is not allowed for implementations of this specification.

Reserved: Where this term is used for ~~defining the~~ signal on a connector contact, ~~the its actual~~ function is set aside for future standardization. It is not available for vendor specific use. Where this term is used for bits, bytes, fields and code values; the bits, bytes, fields and code values are set aside for future standardization. The default value shall be zero. The originator is required to define a ~~reserved-Reserved~~ field or bit as zero, but the receiver should not check Reserved fields or bits for zero.

Restricted: Refers to features, bits, bytes, words, and fields that are set aside for other standardization purposes. If the context of the specification applies to the restricted designation, then the restricted bit, byte, word, or field shall be treated as a value whose definition is not in scope of this document, and is not interpreted by this specification.

Shall: Indicates a mandatory requirement. Designers are required to implement all such mandatory requirements to ensure interoperability with other products that conform to the specification.

Should: Indicates flexibility of choice with a strongly preferred alternative. Equivalent to the phrase "it is recommended".

Vendor specific: Indicates something (e.g., a bit, field, code value) that is not defined by this specification. Specification of the referenced item is determined by the manufacturer and may be used differently in various implementations.

3.2 Acronyms and Abbreviations

~~3.2 Acronyms and Abbreviations~~

1C: Version of SFF-TA-1002 connector that supports an x4 PCIe interface

1U: 1 Standard Unit or Rack Unit 44.45 mm (1.75 inches)

2C: Version of SFF-TA-1002 connector that supports an x8 PCIe interface

2T: Double thick device (16.8mm)

2U: 2 Standard Units or Rack Unit 88.90 mm (3.50 inches)

2x1C: Device with two 1C card edge connectors to support a x8 PCIe interface in a x4 host infrastructure

4C: Version of SFF-TA-1002 connector that supports an x16 PCIe interface

4C+: Version of SFF-TA-1002 connectors that supports an x16 PCIe interface plus an additional tab

NVM: Acronym for Non-Volatile Memory

SSD: Acronym for Solid State Drive

- x4:** - 4 lane device interface link width
- x8:** - 8 lane device interface link width
- x16:** - 16 lane device interface link width

3.3 Definitions

Host: Refers to the interface source or upstream connection

Device: Refers to the interface target

Thickness: Form factor dimension including PCB thickness, z-height of all components plus mechanicals

4. General Description

The application environment for the device form factor is a cabinet or enclosure connecting to one or more devices. The device connects electrically to the system through a card edge connector as defined in SFF-TA-1002. This form factor is intended for use in 1U, 2U, and any other host systems designed to support this form factor (i.e., 1U refers to 1 standard unit of an IT equipment rack and the IT enclosures that fit in this space).

The primary usage of this form factor is for SSDs and/or storage class memory in storage and server systems. Additional use cases include but are not limited to CXL devices, accelerators, and network interface cards (NICs).

The form factor defines a family of devices that vary in length and thickness. Devices may support a variety of interface link widths.

This specification defines the outside dimensions and features of the device enclosure and system interface point. This specification defines the device card edge PCB mating interface with the system but does not define PCB design internal to the device. Internal PCB design is left to the implementer.

[Figure 4-1](#) shows example 3D views for some of the device form factors.

Figure 4-1. Example Device 3D Views

The example above includes the following device implementations starting from left to right.

- E3 long double thickness device (E3.L 2T)
- E3 long single thickness device (E3.L)
- E3 short double thickness device (E3.S 2T)
- E3 short single thickness device (E3.S)
- E3 short double thickness 2x1C device (E3.S 2T 2x1C)

Additional variations of the form factor may be defined in future versions of this specification.

Connector dimensions and mating interface details are defined in SFF-TA-1002.

Connector signal assignments are defined in SFF-TA-1009.

The form factor is specified including an enclosure, with two (2) mounting holes at the front of the device enclosure and one (1) additional mounting hole on each side of the device enclosure which may be used for latch and/or carrier attachment points. The latch/carrier is beyond the scope of the specification.

Implementations conforming to this form factor may support multiple host connection link widths as defined by SFF-TA-1002. Link widths supported by this form factor include x4 (1C), x8 (2C), x8 (2x1C), x16 (4C), and extended x16 (4C+). The example devices in [Figure 4-1](#) are shown with a x4 (1C) connector. Dashed lines show potential x8 (2C), x16 (4C), and x16 (4C+) implementations.

The form factor specifies the size and location for two (2) LED apertures. Additional LED requirements are defined by the SFF-TA-1009 specification.

This specification defines a series of surfaces that are used for contact or grounding. These surfaces are intentionally called out in the drawings and represent functional surfaces at outer extents of form factor. These surfaces are not necessarily raised and may be co-planar, but they shall not be lower than their surrounding surfaces. Surfaces that are not used for grounding are allowed to be conductive or non-conductive. Screw holes shall be conductive.

E3.S and E3.L support direct liquid cooling (DLC), this specification defines thermal contact zones and associated support areas.

5. Physical Configurations: Device Form Factor

This section specifies the dimensions for the device form factor. The dimensioning convention is per ASME-Y14.5-2009 Dimensioning and Tolerancing. For mating interface details refer to SFF-TA-1002.

This specification allows for device implementations that can vary in length and thickness. Table 5-1 lists the nominal dimensions for four device variations.

Table 5-1 Nominal Device Form Factor Dimensions

Device Variation	Width	Length	Thickness
E3.S	76mm	112.75mm	7.5mm
E3.S 2T	76mm	112.75mm	16.8mm
E3.L	76mm	142.2mm	7.5mm
E3.L 2T	76mm	142.2mm	16.8mm

5.1 Datum references

For all the dimensions shown for the different variants of the E3 form factor within this specification, the datums listed in Table 5-2 are defined by this specification or the SFF-TA-1002 specification mating card variants.

Table 5-2 Datum Reference for Device Form Factor Dimensions

Datum	Reference
A	SFF-TA-1008
B	SFF-TA-1008
C	SFF-TA-1008
D	SFF-TA-1002
E	SFF-TA-1002
F	SFF-TA-1002
G	SFF-TA-1002

5.2 E3 Single Thickness Form Factor Physical Dimensions

This section defines the physical dimensions for the E3 single thickness variations of the E3 form factor. These variations include a short version and a long version. The shape of each form factor is shown for example purposes only.

Figure 5-1 E3 Front View

Figure 5-1 defines the center point of the LED apertures. The aperture for each LED shall be a 1.8mm +/- 0.2mm diameter hole. LEDs and any internal lightpipes shall be shielded from each other to prevent bleed from one LED to another. LED light shall be prohibited from escaping the case through openings other than the respective LED apertures (e.g., thermal relief holes). Additional LED requirements are found in the SFF-TA-1009 specification.

Planes except for keep-out areas (e.g., riding surfaces, screw holes, or labels) may have cutouts for debugging or thermal relief.

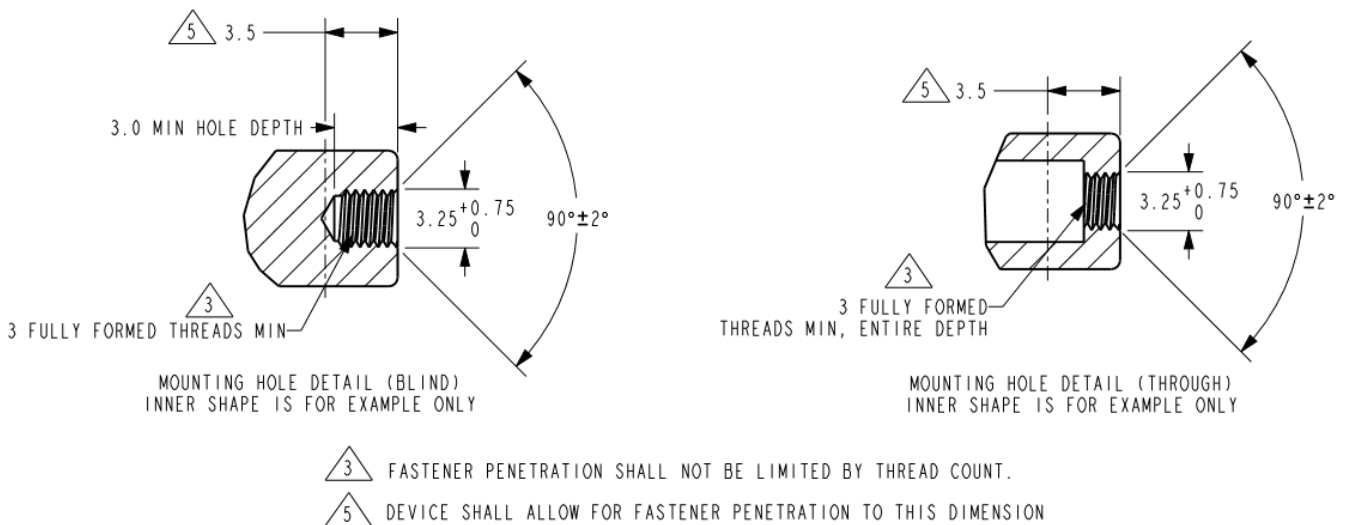

Figure 5-2 Mounting Hole Details

~~E3.S and E3.L support both air and direct liquid cooling. The DLC features shown in Figure 5-3 (E3.S) and Figure 5-5 (E3.L) define the top side primary thermal contact zone, while Figure 5-4 (E3.S) and Figure 5-6 (E3.L) define a two riding surface support areas to support the force applied by a cold plate on for the top side primary thermal contact zone. One, the bottom side device riding surfaces (Note 12) and two, a support combination primary thermal contact zone support area area and/or bottom side secondary thermal contact zone for the primary top side thermal contact zone or secondary side thermal contact zone (Note 13).~~

E3.S and E3.L devices shall support **TBD** kpa applied to the primary and/or secondary thermal contact zones. The force applied to the top side primary thermal contact zone shall be supported by either ~~via the bottom side device riding surfaces support area for thermal contact zone (Note 12), combination primary thermal contact zone support area / bottom side secondary thermal contact zone (Note 13), support area for primary thermal contact zone (Note 13) or or supported via the 4 M3 screwholes / carrier.~~

Warning: In a direct liquid cooling usage, the force applied to the thermal contact zone(s) should not be applied such that there is excessive shear force applied to the card edge and connector. This is a host responsibility, and the card edge and/or connector could be damaged by excessive force.

NOTES:

1. UNLESS OTHERWISE SPECIFIED, DIMENSIONS FOR A SURFACE APPLY TO A SINGLE POINT MINIMUM. IF A SURFACE IS NOT PARALLEL TO THE DATUM STRUCTURE, THE DIMENSION APPLIES TO THE HIGHEST RAISED LOCATION ON THAT SURFACE.
- 2 B1 & B2 ARE DATUM TARGETS USED FOR GD&T MEASUREMENT PURPOSES. THEY ARE NOT PHYSICAL FEATURES ON THE DEVICE.
 - 6 DEVICE RIDING SURFACE. IF NECESSARY, 1.5 DEGREE DRAFT MAXIMUM.
 - 9 AREA CONDUCTIVE TO GROUND. CONTACT PLANE FOR CARRIER MOUNTING. IF NECESSARY, 0.5 DEGREE DRAFT MAXIMUM.
 - 10 MAXIMUM 3 SEPARATE CONCAVE SURFACES Ø10 MAX ALLOWED IN THESE AREAS
 - 11 PRIMARY THERMAL CONTACT ZONE.

Figure 5-3 E3.S Top & Side View

NOTES:

1. UNLESS OTHERWISE SPECIFIED, DIMENSIONS FOR A SURFACE APPLY TO A SINGLE POINT MINIMUM. IF A SURFACE IS NOT PARALLEL TO THE DATUM STRUCTURE, THE DIMENSION APPLIES TO THE HIGHEST RAISED LOCATION ON THAT SURFACE.
-  A1, A2 & A3 ARE DATUM TARGETS USED FOR GD&T MEASUREMENT PURPOSES. THEY ARE NOT PHYSICAL FEATURES ON THE DEVICE.
 -  DEVICE RIDING SURFACE. IF NECESSARY, 1.5 DEGREE DRAFT MAXIMUM.
 -  AREA CONDUCTIVE TO GROUND, CONTACT PLANE FOR CARRIER MOUNTING. IF NECESSARY, 0.5 DEGREE DRAFT MAXIMUM.
 -  MAXIMUM 3 SEPARATE CONCAVE SURFACES $\phi 10$ MAX ALLOWED IN THESE AREAS

Figure 5-6 E3.L Side & Bottom View

5.3 E3 Double Thickness Form Factor Physical Dimensions

This section defines the physical dimensions for the E3 2T variations of the E3 form factor. These variations include a short version and a long version. The shape of each form factor is shown for example purposes only.

Planes except for keep-out areas (e.g., riding surfaces, screw holes, or labels) may have cutouts for debugging or thermal relief.

Dimensions not shown are identical to the E3 single thickness variations.

Figure 5-7 E3 2T Front View

Figure 5-7 defines the center point of the LED apertures. The aperture for each LED shall be a 1.8mm +/- 0.2mm diameter hole. LEDs and any internal lightpipes shall be shielded from each other to prevent bleed from one LED to another. LED light shall be prohibited from escaping the case through openings other than the respective LED apertures (e.g., thermal relief holes). Additional LED requirements are found in the SFF-TA-1009 specification.

The example in Figure 5-7 shows a solid body implementation. Implementations may implement finned structures to maximize thermal performance. E3 2T device implementations may be less than 16.8mm thickness as long as they are greater than the minimum thickness of a single thickness E3 device, e.g. 7mm. Refer to SFF-TA-1023 for thermal requirements and characterizations for device implementations.

Planes except for keep-out areas (e.g., riding surfaces, screw holes, or labels) may have cutouts for debugging or thermal relief.

NOTES:

1. UNLESS OTHERWISE SPECIFIED, DIMENSIONS FOR A SURFACE APPLY TO A SINGLE POINT MINIMUM. IF A SURFACE IS NOT PARALLEL TO THE DATUM STRUCTURE, THE DIMENSION APPLIES TO THE HIGHEST RAISED LOCATION ON THAT SURFACE.

- B1 & B2 ARE DATUM TARGETS USED FOR GD&T MEASUREMENT PURPOSES. THEY ARE NOT PHYSICAL FEATURES ON THE DEVICE.
- DEVICE RIDING SURFACE. IF NECESSARY, 1.5 DEGREE DRAFT MAXIMUM.
- AREA CONDUCTIVE TO GROUND, CONTACT PLANE FOR CARRIER MOUNTING. IF NECESSARY, 0.5 DEGREE DRAFT MAXIMUM.
- MAXIMUM 3 SEPARATE CONCAVE SURFACES $\varnothing 10$ MAX ALLOWED IN THESE AREAS

NOTES:

1. UNLESS OTHERWISE SPECIFIED, DIMENSIONS FOR A SURFACE APPLY TO A SINGLE POINT MINIMUM. IF A SURFACE IS NOT PARALLEL TO THE DATUM STRUCTURE, THE DIMENSION APPLIES TO THE HIGHEST RAISED LOCATION ON THAT SURFACE.

- 2 B1 & B2 ARE DATUM TARGETS USED FOR GD&T MEASUREMENT PURPOSES. THEY ARE NOT PHYSICAL FEATURES ON THE DEVICE.
- 6 DEVICE RIDING SURFACE. IF NECESSARY, 1.5 DEGREE DRAFT MAXIMUM.
- 9 AREA CONDUCTIVE TO GROUND. CONTACT PLANE FOR CARRIER MOUNTING. IF NECESSARY, 0.5 DEGREE DRAFT MAXIMUM.
- 10 MAXIMUM 3 SEPARATE CONCAVE SURFACES $\phi 10$ MAX ALLOWED IN THESE AREAS

5.5 E3 Labels

The size and positioning of labels on a surface has an impact on the thermal performance of the E3 devices. This section defines the maximum label area allowed as well as location of the label on each surface to avoid thermal performance degradation.

Refer to UL/IEC/EN 60950-1 Information Technology Equipment – Safety – Part 1: General Requirements and/or UL/IEC/EN 62368-1 Audio/Video Information and Communication Technology Equipment for requirements governing the use of the Hot Surface Warning Label. If a Hot Surface Warning Label is required, it shall be placed as shown in Figures 5-13, 5-14, 5-15, and 5-16.

- DEVICE LABEL SHOULD NOT EXTEND BEYOND THIS DIMENSION. LABEL SHALL NOT COVER GROUNDING SURFACES.
- HOT SURFACE WARNING LABEL ONLY SHALL BE IN THIS AREA. LABEL SHALL NOT BE PLACED BEYOND THIS DIMENSION.

△ 4 DEVICE LABEL AND HOT SURFACE WARNING LABEL SHOULD NOT EXTEND BEYOND THIS DIMENSION. LABELS SHALL NOT COVER GROUNDING SURFACES.

Figure 5-13 E3.S Label Area

Labels shall only be placed in the hatched area as shown in Figure 5-13. It is recommended that labels be confined to a single surface but if more space is needed then labels may be placed on both surfaces.

- ⚠️ DEVICE LABEL SHOULD NOT EXTEND BEYOND THIS DIMENSION. LABEL SHALL NOT COVER GROUNDING SURFACES.
- ⚠️ HOT SURFACE WARNING LABEL ONLY SHALL BE IN THIS AREA. LABEL SHALL NOT BE PLACED BEYOND THIS DIMENSION.

4 DEVICE LABEL AND HOT SURFACE WARNING LABEL SHOULD NOT EXTEND BEYOND THIS DIMENSION. LABELS SHALL NOT COVER GROUNDING SURFACES.

Figure 5-14 E3.L Label Area

Labels shall only be placed in the hatched area as shown in Figure 5-14. It is recommended that labels be confined to a single surface but if more space is needed then labels may be placed on both surfaces.

Figure 5-15 E3.S 2T Label Area

Labels shall only be placed in the hatched area as shown in Figure 5-15. It is recommended that labels be confined to a single surface but if more space is needed then labels may be placed on both surfaces.

Implementation Note:

For 2T devices, especially with heatsink fins, the placement of labels on the top versus bottom may affect airflow impedance (AFI).

SFF-TA-1023 should be used to characterize the potential AFI impact of label placement.

Figure 5-16 E3.L 2T Label Area

Labels shall only be placed in the hatched area as shown in Figure 5-16. It is recommended that labels be confined to a single surface but if more space is needed then labels may be placed on both surfaces.

Implementation Note:

For 2T devices, especially with heatsink fins, the placement of labels on the top versus bottom may affect airflow impedance (AFI).

SFF-TA-1023 should be used to characterize the potential AFI impact of label placement.

5.6 E3 LEDs

E3 devices shall support two LEDs on the front of the device. The LEDs have the following functions:

Power/Activity LED: Green or Green/White bi-color

The Power/Activity LED is driven and completely controlled by the device. The green element is mandatory for all device variations. The green element has two functions, indicating when the device has power with no issues with its power regulation and when there is host-initiated I/O activity.

The white element is optional and may be implemented by devices to indicate when it is safe to remove the device from the host.

For NVMe SSD devices the white element shall not be implemented.

Fault/Identify LED: Amber/Blue bi-color

The Fault/Identify LED indicates when a device is in a fault condition or when the host needs to identify the device in a chassis. The amber and blue elements are mandatory for all device variations and are controlled by the LED pin on the device connector.

Specific properties such as wavelength, luminosity, and behaviors for the various LEDs are defined in SFF-TA-1009. Definition of the LED control pin is also defined in SFF-TA-1009.

6. E3 Power/Thermal Requirements

The following section covers the power and thermal requirements of the device.

6.1 ~~Initial Slot Power Limit~~ Power Requirements

Power constraints for this device form factor are summarized in Table 6-1. For more information, refer to SFF-TA-1009 *Enterprise and Datacenter Standard Form Factor Pin and Signal Specification*. ~~defines the initial slot power limit for the device.~~

Table 6-1 ~~Device Power Requirements for an E3 system implementation~~ Initial Slot Power Limit

Parameter	E3.S	E3.L	E3.S 2T	E3.L 2T	Comment
Initial Slot Power Limit (12Vpinit)	25W	40W	40W	70W	Refer to SFF-TA-1009 for definitions and additional details.
<u>Maximum device power capability</u>	Up to 79.2 W at 12 V				Limited by the current capability of SFF-TA-1002

6.2 Thermals

For detailed device thermal requirements, refer to SFF-TA-1023 *Thermal Specification for EDSFF Devices*.

6.3 Informative: ~~Maximum Sustained Device Power~~ Recommended Sustained Max Power

There is no specified maximum sustained power for this device apart from the connector limits. The connector is defined to supply a maximum sustained current of 6.6 A which at 12 V nominal limits the form factor to 79.2 W of power. This value, however, is further limited by the operating environment of the host and device. The host manufacturer should provide their requirements and communicate this value as defined by the 12Vpsus definition in SFF-TA-1009 *Enterprise and Datacenter Standard Form Factor Pin and Signal Specification*.

Table 6-2 defines the recommended maximum sustained power for air-cooled E3 devices. DLC cooled E3 devices can easily exceed these recommendations. This recommendation serves as a starting point as SFF-TA-1023 should be used to determine how much power can be air-cooled based on the thermal design of the E3 device. ~~allowed by each device variation.~~

Table 6-2 Recommended Sustained Maximum Power for Air-Cooled E3 Devices per Form Factor

Device	E3.S	E3.L	E3.S 2T	E3.L 2T
Max Power	25W	40W	40W	70W

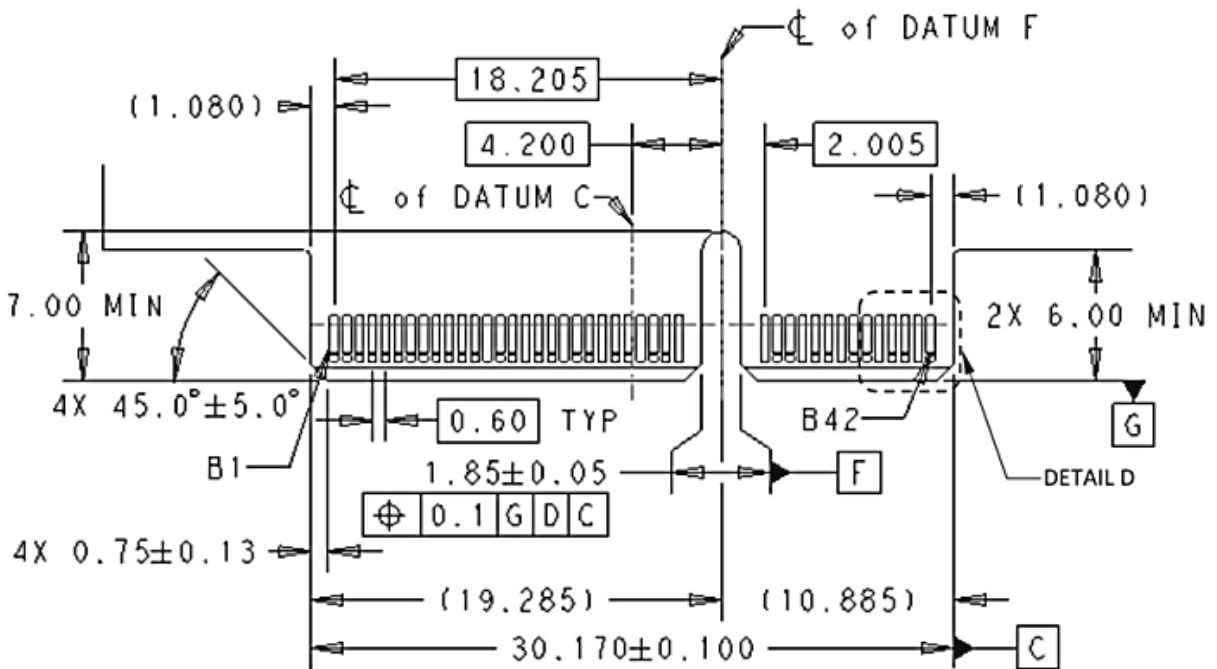

7. Informative: SFF-TA-1002 Edge (Plug) Mechanical Drawings

This section shows the card edge mechanical drawing for convenience only. This section's drawings are from SFF-TA-1002 Rev 1.3. See the latest SFF-TA-1002 for normative dimensional, Detail views, and performance requirements.
